

1. Landing page

(a) Nav bar

- right most (only sign in btn)
- left side (PS-details - minimalistic)
- Center - Empty
- Capsule Nav bar (b-rad-less) &
Size changes (100% → 80%) when scrolled.

(b) Hero section

- Background Hero Image (left aligned PS details, heading)
- C.T.O buttons like "Launch Intelligence workspace" [only 1 button]
- Prompt for background img to generate.

(c) Highlight points (Very short & crisp + Easy to understand) (3-4 cards enough)

(d) Video (we will add at last) → use some scroll animation

- After demo video, there should be "Try out" button,
 - we can add link to a static demo output
 - right now, to a empty file

(e) ML pipeline (read ML Code to understand)

- make imp points to understand about our work in a glance at landing Page!
- All imp with technologies

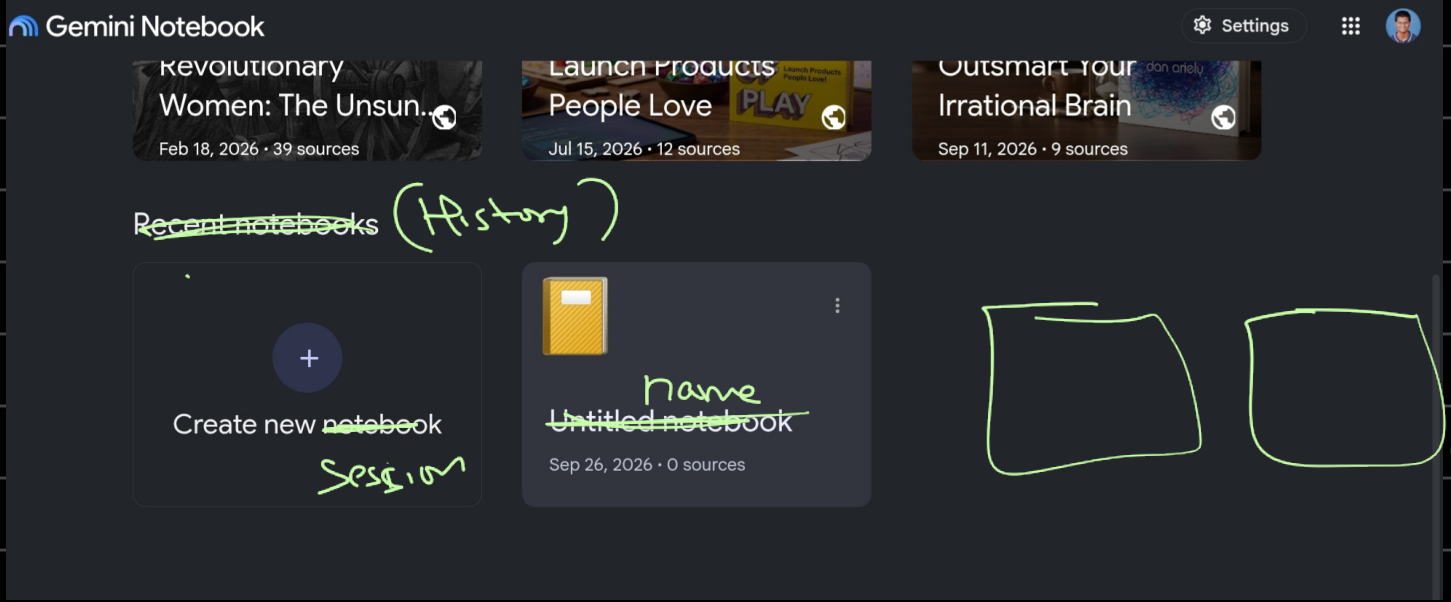

(f) Footer section,

- relevant details & minimal enough.

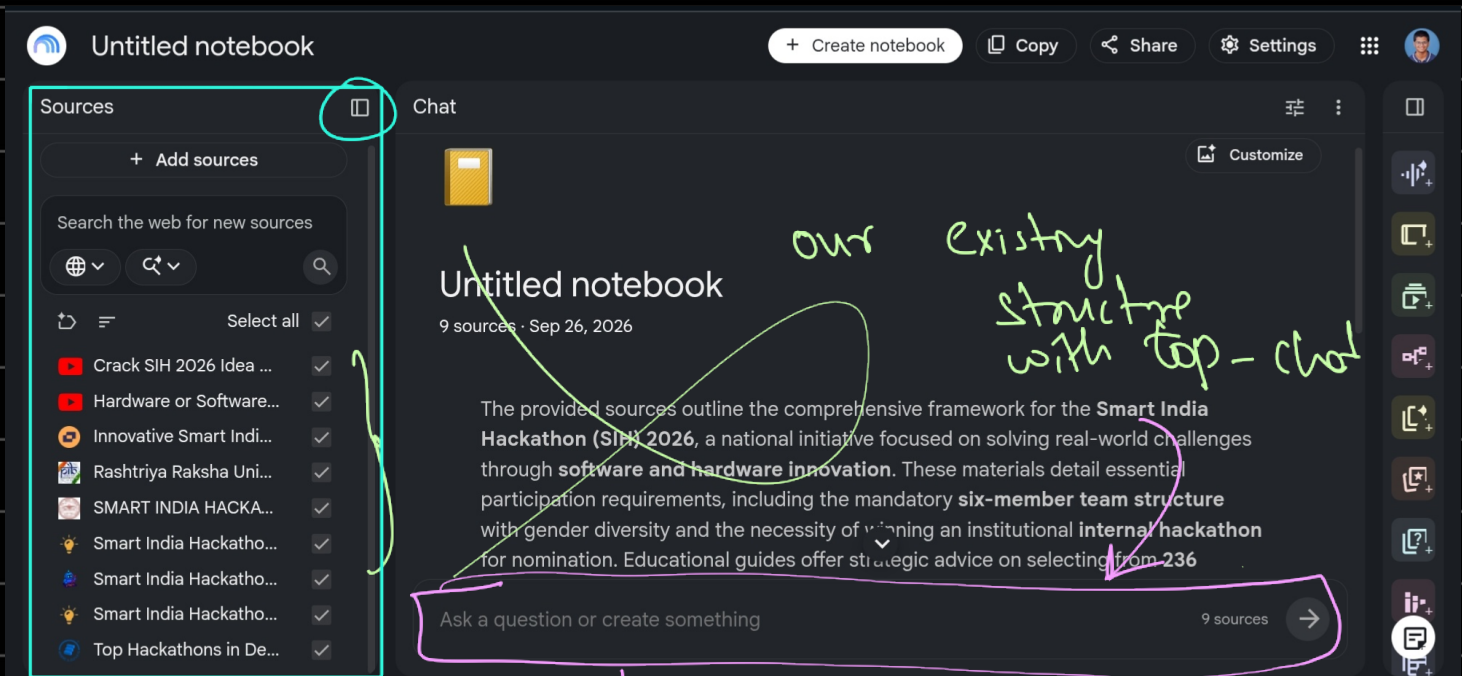

* Workspace + Reports page

What is NotebookLM Inspiration.

(a) Work space folders (1st)

b) when user opens any folder from above
 ↳ we need to change our existing workspace a bit

→ Our existing code have unnecessary padding on left-right, remove them for more space.

(C) Needs massive changes.

↳ right now, ML is not generated for this reports page

↳ But plan is to user can select custom files from opened folder and then can select date range to generate report and it will render when clicked "Generate".

↳ and generated reports will be saved (by backend dev)
